

KCIA 2025 Standards Updates on Hybrids

The wheat x jointed goatgrass hybrid is now an objectionable weed in wheat fields. The hybrid has the same cleaning note requirement as jointed goatgrass. This hybrid is usually slightly above the canopy in bunches of 5 or less.

The wheat x triticale hybrid is now a prohibited other crop. During a wheat field inspection, it should be treated the same as a triticale plant. This is an extremely rare hybrid. If you find it, please label it and mail a sample the KCIA office.
