**KANSAS CERTIFIED SEED
DIRECTORY** of producers of field
crops including wheat, spring oats,
triticale, rye, canola, and winter barley

Your Legacy Grows From The Ground Up.

Equipped with industry-leading box capacity,
the **Great Plains BD7600 Min-Till Drill** pairs seeding consistency and durability
with future-forward technology – including optional DrillCommand®
for on-the-go control and monitoring from the tractor cab.

BD Box Drill Lineup Features

Great Plains Metering System meters large seeds, small seeds, & fertilizer through the same seed cup

Optional split-box configuration adds versatility

Narrow-transport min-till & no-till models fold to under 10'

Prepare for the future of farming

2026 WHEAT CROP REVIEW

Weather and Crop Development

2026 Kansas wheat growing season

The 2025-26 winter wheat growing season in Kansas was a season of hope and despair. The crop had, overall, a great start to the growing season. Anywhere from 3 to over 10 inches of precipitation accumulated in the wheat growing region of the state during the months of September, October, and November, which resulted in excellent conditions for crop emergence and early establishment. Moisture availability in some fields was excessive, with parts of south-central Kansas observing different levels of waterlogging. In addition, precipitation towards late October into November kept fields wet, and as a result, many growers could not finish planting all the areas that were originally intended for wheat. This resulted in a total of 7.3 million acres of winter wheat planted in the state, which is down 4% from the previous year. Despite a few localized drawbacks during planting, the 2025-26 Kansas winter wheat crop was off to an excellent start across the state, a rarity in Kansas where fall drought frequently plagues wheat emergence and stand establishment.

The above-average precipitation during the fall was accompanied by above-average temperatures, with temperature departures from normal ranging from +2 to +8°F across the state. This resulted in a large amount of biomass produced by the wheat crop, which in some cases was referred to as “too big” in parts of western Kansas. The greater biomass accumulated by the end of the fall resulted in greater water use, so the crop started to deplete the accumulated moisture early in the season.

Winter brought about dry weather with continued above-average temperatures. Virtually no precipitation accumulated in much of the wheat-growing region of the state, and temperatures were +4 to +8°F above normal. With these above-normal temperatures, the crop never really stopped growing, and additional biomass was produced during the winter. The production of biomass requires soil moisture; thus, the wheat crop continued to use water during the winter. It is important to remember that biomass production (and consequent water use) during the winter is unproductive unless the wheat is used as a dual-purpose crop (graze and grain), in which case the biomass is of financial value. However, water use during the winter rarely results in grain yield improvements since the crop is in the vegetative stages of development. Therefore, the continued water use by a growing crop during the winter further dried the soil profile, setting up for dry and warm conditions in early spring.

The winter conditions had three major consequences: First, the soil profile was dry prior to a critical phase of the crop's

development. Beyond the direct impact of drought on the crop per se (which was not yet apparent by late winter, but would soon be), these dry conditions also precluded any nitrogen or sulfur fertilizer applied to the wheat crop from infiltrating down into the root zone. The second impact was an increased population and activity of bird cherry oat aphids, transmitting barley yellow dwarf virus at higher rates than seen in many years in the state. The third consequence was an advanced phenology of the crop in response to the increased winter temperatures. Parts of south-central and southwest Kansas were already well into stem elongation in mid-March, which is sooner than average for the state. The problem with an earlier-than-usual crop development is that the crop is more exposed to potential freeze damage, since more advanced stages of crop development are more sensitive to cold. As expected, mid-March brought some extremely cold temperatures, with as many as 16 hours of temperatures below 24°F – a threshold that crops at the jointing stage can sustain freeze damage – and as many as 8 hours of temperatures below 12°F – which can cause damage to a crop in the tillering stages. This first freeze of the season caused considerable loss of foliage in northwest Kansas and loss of tillers in parts of central Kansas.

Conditions continued to be dry and warm through early spring. By April 30, little to no precipitation had fallen into the wheat growing region of the state, and temperature departure from normal was as high as +10°F. The crop continued its accelerated development, now showing severe symptoms of drought stress (shortened stature, rolled up blueish leaves, and dry down of lower leaves). The accelerated development was again hampered by a spring freeze in mid-to-late April, when the crop was primarily between the boot stages and heading of development in northwest Kansas to flowering and early grain filling in southeast Kansas. This time, temperatures remained below 32°F for as many as 9 straight hours, causing damage to the developing heads in much of the central corridor of the state. Another freeze damage in early May further reduced the yield potential of the crop in the northwest corner of the state. The accelerated development in south-central and southwest Kansas led some growers in the Barber County region to attempt harvest as early as May 20, resulting in exceptionally low yields and grain test weights.

While scattered rains accumulating in 3-6 inches of moisture and temperatures back near normal levels during the month of May brought relief to a stressed crop, the yield potential of the Kansas wheat crop had been compromised by early May. Many growers had already activated insurance due to expected yield levels less than 5-10

bushels per acre. Some of the May rainfall events also unfortunately came with hail across the state. In addition to drought and hail, many wheat fields across the state also started to show symptoms of wheat streak mosaic virus complex, especially in western Kansas. While the incidence of wheat streak mosaic virus complex was not as widespread as in the 2024-2025 season, the southwest corner of the state – with areas spanning from Hamilton County south to the Oklahoma border, and east to western Meade County – was severely impacted by the disease, with multiple fields being zeroed out in this region.

To further confound matters, the season-long drought turned into excessive precipitation. Growers observed as their fields, which were near harvest, started to become waterlogged in portions of the state. This was a particular problem near Solomon and Salina but much of south-central Kansas as well. The month of June brought anywhere from 2 to over 14 inches of precipitation in parts of the wheat growing region of the state, which contributed to a poor ending to the season. The consequences of this pre-harvest rainfall were (i) harvest was prolonged and delayed (ii) some fields started having issues with pre-harvest summer weeds, and (iii) a decrease in wheat quality as related to loss of test weight and accumulation of saprophytic fungi. These factors led to an estimated 17-20% abandonment of the wheat area in Kansas. The wheat that was able to be harvested had variable and low yield levels, with rare, good fields yielding 40-50 bushels per acre, but the majority ranging between 15 and 35 bushels per acre. (Romulo Lollato, Kansas State University Extension Wheat Specialist and Chip Redmond, Kansas State University Weather Data Library)

Insects

Prior to planting wheat in 2025, there was much concern about wheat curl mites that vector the wheat streak mosaic viruses. Wheat streak mosaic viruses had caused considerable concern, and sometimes significant wheat losses, in the previous 3-4 years. Because of this concern, growers were successfully vigilant in destroying as much volunteer wheat as possible at least 2 weeks prior to planting, and much less Wheat Streak Mosaic infection was detected than was originally projected. Destroying volunteer wheat in a timely manner eliminates the "green bridge" that mites, and other wheat pests, need to survive non-wheat growing months.

Armyworms were evident during planting time in some areas of the state, causing parts of some fields to be replanted. However, they were also not as problematic as feared, probably due to many growers that delayed planting a little to try to avoid some of these pests.

A few fields were affected by Hessian fly infestations. No large losses were reported; just a few spots in fields throughout the state were destroyed in the spring due to Hessian fly infestation.

Overall, no major pest problems affecting large areas of Kansas were reported, but enough to remind growers that pests are still around and competing for wheat every year. (Jeff Whitworth, Kansas State University Department of Entomology)

Harvest Statistics

The Kansas Agricultural Statistics' estimate of the 2026 crop was 346.8 million bushels from 7.3 million acres, a slight decrease from last year's crop. (December 2025, *Kansas Wheat History*, Kansas Agricultural Statistics)

Figure 2. Historical Kansas wheat production

KS Providence moved into the number one slot as the top-planted variety, accounting for 5.8% of the state's wheat planted acres. SY Wolverine ranked second with 4.5%. AP Prolific took the third spot with 3.5%; followed by Bob Dole in fourth place at 3.3%. Canvas was the fifth most popular variety at 2.8%. (March 2026, *Wheat Variety*, Kansas Agricultural Statistics)

Figure 3. Leading wheat varieties in Kansas; percentage of seeded acreage for the 2026 crop

2026 PERFORMANCE TESTS

The Kansas Agricultural Experiment Station annually compares both new and currently grown varieties in the state's major crop-producing areas. These performance tests generate unbiased performance information designed to help Kansas growers select wheat varieties suited for their area and conditions.

One-year or one-location results can be misleading because of the possibility of unusual weather or pest conditions. **Be sure to keep extenuating environmental conditions in mind when examining test results.** For more information please visit: agronomy.k-state.edu/outreach-and-services/crop-performance-tests.

Varieties

Public varieties are selected for inclusion in the tests on the basis of several criteria. Most represent new or established varieties from Oklahoma, Texas, and Colorado with potential for successful use in Kansas entered at the request of the originating institution.

Originators or marketers enter privately developed varieties voluntarily. Entrants choose both the entries and test sites. The 2026 entrants are listed in Table 1.

Results and Variety Characterization

Results from Kansas tests are presented in Tables 3 through 11. Yields are reported as bushels per acre (60 lb/bu) and are adjusted to a moisture content of 13% where moistures were reported at harvest. Yields also are converted to percentages of the test average to speed recognition of the highest-yielding entries. Multi-year averages are presented for those varieties entered more than 1 year.

Additional information such as test weight, heading date, and plant height is helpful for fine-tuning variety comparisons. Planting varieties with a range of maturities helps minimize weather risks.

At the bottom of each table is the (0.05) least significant difference (LSD) for each column of replicated data. One can think of the LSD as a "margin of error" that shows how big the difference between two varieties must be for one to be 95% confident that the difference is real. The use of the LSD is intended to reduce the chance of overemphasizing small differences. Small variations in soil structure, fertility, water-holding characteristics, and other test-site characteristics can cause considerable yield variation among plots of one variety.

Electronic Access

To access crop performance testing information electronically, visit the website at: agronomy.k-state.edu/outreach-and-services/crop-performance-tests

Research and Duplication Policy

When companies submit entries, permission is given to Kansas State University to test varieties and/or hybrids designated on the entry forms in the manner indicated in the test announcements. Seed submitted for testing should be a true sample of the seed being offered for sale.

All results from Kansas Crop Performance Tests belong to the university and the public and shall be controlled by the university to produce the greatest benefit to the public. Performance data may be used in the following ways: 1) Tables may be reproduced in their entirety, provided the source is referenced and data are not manipulated or reinterpreted; and 2) advertising statements by an individual company about the performance of its entries may be made as long as they are accurate statements about the data as published, with no reference to other companies' names or cultivars. In both cases, the following must be included with the reprint or ad citing the appropriate publication number and title: "See the official Kansas State University Agricultural Experiment Station and Cooperative Extension Service Report of Progress 1200 '2026 Kansas Performance Tests with Winter Wheat Varieties,' or the Kansas Crop Performance Test website, agronomy.k-state.edu/outreach-and-services/crop-performance-tests for details. Endorsement or recommendation by Kansas State University is not implied."

Excerpts from the
University Research Policy Agreement with Cooperating Seed Companies

Permission is hereby given to Kansas State University (KSU) to test varieties and/or hybrids designated on the attached entry forms in the manner indicated in the test announcements. I certify that seed submitted for testing is a true sample of the seed being offered for sale.

I understand that all results from Kansas Crop Performance Tests belong to the University and the public and shall be controlled by the University so as to produce the greatest benefit to the public. Performance data may be used in the following ways: 1) Tables may be reproduced in their entirety provided the source is referenced and data are not manipulated or reinterpreted; 2) Advertising statements by an individual company about the performance of its entries may be made as long as they are accurate statements about the data as published, with no reference to other companies' names or cultivars. In both cases, the following must be included with the reprint or ad citing the appropriate publication number and title: "See the official Kansas State University Agricultural Experiment Station and Cooperative Extension Service Report of Progress 1200, '2026 Kansas Performance Tests with Winter Wheat Varieties,' or the Kansas Crop Performance Test website, agronomy.k-state.edu/outreach-and-services/crop-performance-tests, for details. Endorsement or recommendation by Kansas State University is not implied."

About this Directory

The seed producers listed in this directory have applied to the Kansas Crop Improvement Association (KCIA) for inspection of seed production fields. KCIA checks all seed sources to confirm seed eligibility.

Seed produced on these fields is not Certified or Quality Assured until the field has passed inspection and the harvested seed has been properly conditioned, sampled and tested.

Seed meeting certification standards is issued a Certificate of Inspection and may be sold as Certified Seed. Quality Assured seed must meet similar standards.

Kansas Seed Law requires all seed to be properly labeled. The label is your warranty. Each bag of Kansas Certified Seed must be labeled with an official KCIA certification tag.

A completed KCIA Bulk Retail Sale Certificate or Bulk Invoice Label must accompany each bulk sale. Contact KCIA regarding the specific rules for re-selling bulk Certified Seed.

KCIA does not produce, process, buy or sell seed; therefore, assumes no financial responsibility regarding any seed listed herein.

Growers guarantee that Foundation, Registered, Certified or Quality Assured seed sold by them conforms to the standards of the Association in origin, varietal purity and quality. KCIA should be advised of any complaints made to the producer or vendor of seed.

Listing of a producer does not imply that all requirements have been met at time of publishing. Contact KCIA if you have concerns or questions about seed offered as Certified or KCIA Quality Assured.

Plant Variety Protection

The Plant Variety Protection Act (PVPA) makes it possible to protect plant varieties by law. Therefore, it is unlawful to sell, offer for sale or expose for sale, uncertified seed by variety name when it is a variety for which a Certificate of Plant Protection has been issued, specifying sale only as a class of certified seed.

It is the responsibility of the grower to inform the purchaser that a variety is protected and at what level. This may be accomplished on the label by the appropriate statements. The status of varieties listed in this directory is as follows:

PVP Status* – Small Grains

****As of July 28, 2026**

New varieties with a PVP Status level of 0, 1, 2, or 3 may be updated to a different level in the future. Level is updated at KCIA when new certificate lists are published online by the Plant Variety Protection Office (PVPO) or upon verified notification from the breeder.

This document does not reflect other protections such as patents or use agreements. Additional licensing and/or marketing restrictions may apply.

This list does not include all varieties found in the marketplace. For varieties not listed or status updates please refer to the PVPO website, or contact the breeder/genetics provider or the KCIA office.

THUNDERTALL™ TRITICALE

Whether you're looking for a hay, silage, or graze-out triticale variety or blend, we have an award-winning solution to your forage need. At 21.7, 21.8, & 22.7 tons per acre, ThunderTall™ & ThunderTall II™ topped the NMSU irrigated dairy variety trials.

ThunderTall II™, ThunderCale V™, and ThunderGreen™ Rye were tops in TAMU trials at Bushland, TX.

For grazing reputation, cattlemen say ThunderGraze Extra™ has doubled their production.

Our triticale won the Kansas State Fair! See us for ThunderCale™ and the complete Thunder™ brand of triticale and rye.

THE BEST OF A NEW BREED OF TRITICALE!

SlickTrit II®

Beardless Triticale

Wins NMSU forage trials for 2020-2021
for the 6th time

- ✓ Higher Yield Potential
- ✓ Faster Tillering
- ✓ Higher Leaf-to-Stem Ratio
- ✓ Higher Feed Values
- ✓ Increased Standability
- ✓ More Milk per Acre
- ✓ Three weeks more grazing than wheat

Produced 55 lbs. More Milk
Per Ton of Silage

★★★ #1 Forage Producer in the 2023-2024 AgriLife Small Grain Trials at Bushland 5.5 Dry Tons per acre "BOOT"

★★ #1 Forage Producer 2022-2023 AgriLife Small Silage Trial at Bushland 7.8 Dry Tons per acre "SOFT DOUGH"

★ #1 Forage Producer NMSU 2021 Forage Trials 21.5 Tons Silage, 7.5 Dry Tons per acre

#1 Forage Producer NMSU 2020 Forage Trials 20.6 Tons Silage, 7.2 Dry Tons per acre

#1 Forage Producer NMSU 2017 Forage Trials 20.1 Tons Silage, 7 Dry Tons per acre, 19,128 lbs. Milk per acre

#1 Forage Producer KSU 2015 Forage Trials 7.17 Dry Tons per acre

#1 Forage Producer NMSU 2015 Forage Trials 20.6 Tons Silage, 7.6 Dry Tons per acre

#1 Forage Producer NMSU 2014 Forage Trials 14 Tons Silage, 16,192 lbs. Milk per acre

#1 Milk lbs. per Acre NMSU 2010 Forage Trials 16.5 Tons Silage, 15,941 lbs. Milk per acre

30% more forage than wheat!
More Tillering,
Stronger Stalks!

State of the art
processing plant!

Excellent Dairy
& Beef Silage!

WHEAT ALLIANCE

ELITE GENETICS. MADE FOR THE PLAINS.

WHEAT ALLIANCE

KS FLINTLOCK

HARD RED WINTER

Central into Western Irrigated

- VERY HIGH YIELD POTENTIAL, WITH TOP PERFORMANCE IN CENTRAL KSU BREEDER TRIALS
- GOOD LEAF RUST RESISTANCE WITH SOLID STRAW STRENGTH & GRAIN QUALITY

WHEAT ALLIANCE

KS TRADITION

HARD RED WINTER

Western Dryland / Irrigated, into Central

- STRONG OVERALL AGRONOMICS WITH GOOD RUST RESISTANCE & EXCELLENT VIRUS COMPLEX TOLERANCE
- GOOD STRAW STRENGTH, DROUGHT TOLERANCE, & ACID SOIL TOLERANCE

WHEAT ALLIANCE

KS BILL SNYDER

HARD RED WINTER

Central & Western Dryland/Irrigated

- FLEXIBLE FIT ACROSS CENTRAL & WESTERN REGIONS UNDER BOTH DRYLAND & IRRIGATED SYSTEMS
- STRONG DUAL-PURPOSE OPTION THAT MAINTAINS YIELD POTENTIAL POST GRAZING

WHEAT ALLIANCE

KS PROVIDENCE

HARD RED WINTER

Widely adapted across the Great Plains

- WELL-SUITED ACROSS A WIDE RANGE OF ENVIRONMENTS WITH PROVEN YIELD STABILITY
- A RELIABLE OPTION FOLLOWING CORN WITH ITS DECENT SCAB TOLERANCE

WHEAT ALLIANCE

KS TERRITORY

HARD RED WINTER

Western Dryland

- RELIABLE OPTION FOR WESTERN DRYLAND ACRES ACROSS VARIABLE CONDITIONS
- A STRONG FIT FOLLOWING CORN WITH GOOD DROUGHT & SCAB TOLERANCE

HARD WHITE

JOE, KS BIG BOW
KS SILVERADO

HARD RED

KS AHEARN, KS DALLAS, KS HAMILTON,
KS HOMESTEADER CL+, KS WESTERN STAR

Serious wheat varieties for serious wheat growers.

If you're reading this, you're probably serious about wheat. So are we. OGI varieties offer strong disease resistance, dual-purpose adaptability, and proven performance in your acres. Seriously!

SUGGESTED VARIETIES:

(ranked by more likely to be adopted to KS area)

Showdown*, Orange Blossom CL+*, Doublestop CL+*†

Breakthrough*, High Cotton*, OK Corral*

Green Hammer†, Strad CL+*†

(and in special situations)

Butler's Gold†, Paradox†‡, Breadbox†‡

* Graze 'N' Grain † Gold 'N' Grain ‡ Contract-Only

Forthcoming Varieties:

Yield-improved Breakthrough with deeper virus resistance

Yield-improved Lonerider with better disease resistance

Find an OGI Seed Source near you.

GENETICS, INC.

2026 KCIA APPROVED BULK RETAIL FACILITIES

Bulk Retail Facilities are additional outlets approved by KCIA for purchasing Kansas Certified seed. A bulk retail facility is responsible for complying with all seed laws and certification standards and assumes all responsibilities for that seed.

The varieties of seed available at each bulk retail facility will vary from year to year. Please contact the business to determine what varieties they have in their inventory.
